Notes:

- Referenced ambient temperature 25°C
- Test Condition: 100 kHz, 0.25 V_{rms}
- Saturation Current - I_{sat} (typ): DC current (A) that will cause L₀ to drop approximately 30%
I_{sat} (min): DC current (A) that will cause L₀ to drop 30% max
Temperature Rise Current - I_{rms} (typ): DC current (A) that will cause an approximate ΔT of 40°C
I_{rms} (min): DC current (A) that will cause an approximate ΔT of 40°C max
- Operating temperature range includes self-temperature rise
- The rated current as listed is either the saturation current or the heating current depending on which value is lower.

PART NUMBER KEY

F1F3 - 1054T - XXX X

Type / Product Series

F1F3-1054T = High Performance Shielded SMD Inductors

Inductance Tolerance

M = ±20%

Inductance *

1R0 = 1.0 μH

* Note: Inductance expressed by three figures. The unit is micro henry (μH). The first and second figures are significant digits, the third figure expresses the number of zeros which follow the two figures. If there is a decimal point, it is expressed by the capital letter "R" (3R8 = 3.8 μH). In that case, all figures are significant digits.
