Spacer: 4 mm diameter max, 8 mm high minimum

Screw Size: (4) M3X0.5

Mounting torque: 3 kgf-cm

Type 2

Mounting from top without spacers

Screw Size: (4) M3X0.5

Output Terminals

Mate with round or Y terminals with max OD of 6.75 mm and max ID of 3.9 mm

Terminal Size: (2) M3

Torque: 3 kgf-cm

Mounting Clearance

Allow at least 4 mm side clearance and 5 mm height clearance. If clearances aren't met, the isolation and withstand specifications may not be met.

Field Ground

Should be connected to the earth (ground) terminal of the apparatus otherwise conducted noise and output noise will increase.

APPLICATION NOTES

On/off Remote Control

A PS On/Off remote control is provided in CN4. See Figure 1 for the PS-ON diagram and control function.

Note: Power on: $V_{PS-ON} \leq 2V$, $I_{PS-ON} \geq 2\text{ mA}$
 (PS-ON and GND short, $I_{PS-ON} = 4.5\text{ mA}$ typical)
 Power off: Open circuit, $V_{PS-ON} = 11\sim 16\text{ V}$
 When the PS On/off remote control function is not used, connect a short circuit between the PS-ON control & the signal GND.

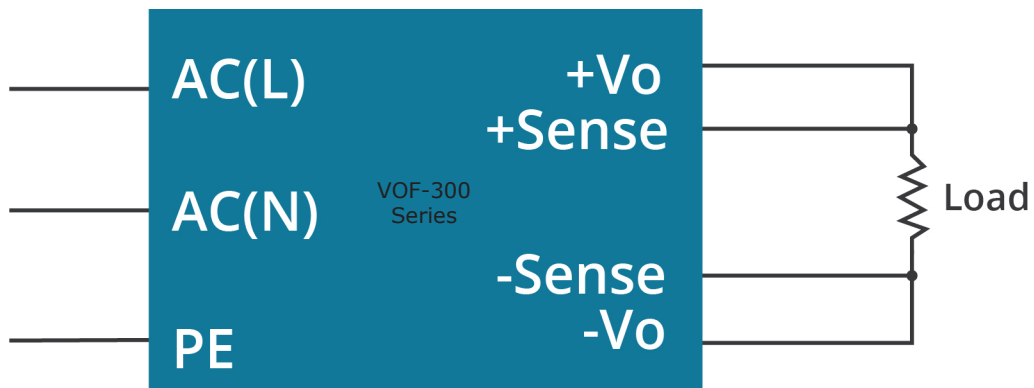

Output Remote Sensing

The VOF-300 series can remotely sense both lines of the output. The feature moves the effective voltage regulation point from the output of the unit to the point of connection of the remote sense pins. This feature automatically adjusts the real output in order to compensate for voltage drops in distribution and maintain a regulated voltage at the point of load. The remote sense voltage range is as follows:

$$[(+V_{out}) - (-V_{out})] - [(+Sense) - (-Sense)] \leq 10\% V_{o_nominal}$$

If the remote sense is not used, the sense pins should be connected locally to the respective V_{out} pins. The remote sense pins are located on CN4.
