FXP7000 Series
AC-DC Power Supply

The FXP7000 Series of rack-mounted power systems provides AC front-end capability to automatic test equipment, telecom, data communications, and other distributed power designs. The hot-pluggable FXP supplies do not include an output isolation diode and may be paralleled up to 210 kW of total output power. These supplies provide excellent protection against input voltage transients.

Access to interfaces for remote sensing, remote voltage adjust, current sharing, current monitoring, power supply status, standby voltage and inhibit, as well as power connections, is through a connector at the rear of the supply. The FXP has its fan, handles, voltage adjust, and indicator lights on the front panel and a single hot-plug connector on the rear. Airflow is from the front through the rear. Alarm, monitoring, and control signals are floating from the main output and can be referenced to the positive or negative output or sense line of the power supply. The output is floating with respect to the chassis and may be used as a positive or negative polarity supply.

The FXP7000 Series meets international safety requirements and is CE Marked to the Low Voltage Directive. This series operates on three-phase European voltages as well as (up to) 480 VAC, delta or wye.

Key Features & Benefits

- Three-Phase AC Input
- Suitable for 3U or 5U Height Mounting
- Single-Wire Current Share or Droop Current Share
- Remote Voltage Adjust and Current Monitoring
- Overtemperature, Overload and Overvoltage Protection
- LED Supply Status Indicators
- Current Share Control for up to 30 Units
- Standard & Customized Rack Adaptors Available
- Front Panel Selectable-Input-Range
- RoHS Compliant

FXP7000 Series

MODEL SELECTION

MODEL	OUTPUT VOLTAGE	INPUT VOLTAGE RANGE 3-PHASE	ADJUSTMENT RANGE	MAXIMUM OUTPUT CURRENT	LINE REGULATION	LOAD REGULATION [1]	INITIAL SETTING ACCURACY
FXP7000-48-SG	48 V	180 to 264 VAC or 342 to 528 VAC	45.6 V to 50.4 V	145 A	0.15%	0.2%	47.90 V to 48.10 V

INPUT SPECIFICATIONS

PARAMETER	DESCRIPTION/CONDITIONS		MIN	NOM	MAX	UNITS
Input Voltage - AC	3-phase delta low input range, nominal. 3-phase delta high input range, nominal. Continuous deviation from the above nominals.		200 380 -10		240 480 +10	VAC VAC %
Input Current	Per phase at full rated load.	FXP7000 at 180 VAC:			30	Arms
Inrush Surge Current [2]	Internally limited.	Vin = 264 VAC (one cycle). 25° C: Vin = 528 VAC (one cycle). 25° C:			38 38	Apk
Input Frequency	AC input.		47		63	Hz
Hold-up Time	After last AC line peak at full power.	208 VAC: 400 VAC:	17 13			ms
Operating Frequency	Switching frequency, fixed.			100		kHz
Power Factor			0.90			W/VA

OUTPUT SPECIFICATION

PARAMETER	DESCRIPTION/CONDITIONS		MIN	NOM	MAX	UNITS
Output Voltage Adjustment Range	An additional 1.0 Volt is provided to the output terminals to provide for load lead losses.		45.6	48	50.4	V
Output Power	Continuous duty rating.				7000	Watts
Output Current	Continuous duty rating.				145	A
Efficiency	Full rated load (208 VAC).		88	91		%
Regulation	Load, Maximum deviation with 0 to 100% load change: With Remote Sense connected: With Remote Sense not connected: Utilizing Droop Current Share: Line, Under all specified operating conditions.				 0.2 0.75 2.0 0.2	 %
Ripple & Noise	Measured at mating connector w/ 0.01µF + 10µF Tant.	20 MHz BW: 100 MHz BW:			1 2	% p-p
Overshoot / Undershoot	Output voltage overshoot/undershoot at turn-on.				0	%
Minimum Loads	Minimum loading required to maintain regulation.		0			A
Transient Response	Max. recovery time, to within 1% of initial set point due to a 25% load change, 1A/µs.	Time: Deviation:			800 3.2	µs %
Turn-On Delay	Time required for initial output voltage stabilization after power-up.				3	s
Turn-on Rise Time	Time required for output voltage to rise from 10% to 90%.				100	ms

[1] With Remote Sense connected.
[2] The minimum time OFF between two turns ON of the unit needs to be > 30 seconds

INTERFACE SIGNALS AND PROTECTION

PARAMETER [3, 4]	DESCRIPTION/CONDITIONS	MIN	NOM	MAX	UNITS
AC Power Fail Warning	Warning provided prior to Vout dropping 5% after loss of AC input.	4			ms
Auxiliary Power	Output voltage - diode isolated. Inclusive of line, load, and initial tolerances.	11.6	12.0	12.4	V
	Output current.			500	mA
Current Monitor	Monitor output current over a compliance range of 0~10 V. Normal output: Total error current:	 0.5	 0.10 0	 0.5	 mA/A mA
Current Share	Static sharing deviation as a percent of full-load rating for loads >10%. Active: Passive:			 5 10	 %
Input Range Select Status	Maximum signal resistance in high input voltage range selection.			0.10	Ω
Loss of Phase Warning	Warning provided prior to protective reduction in current limit.	500			ms
Output Inhibit [5]	Voltage required to enable supply (0.5 mA sink).			1.0	V
Output Interlock [5]	Voltage required to enable supply (6 mA sink).			1.0	V
Output Overload Protection	Straight line current limit (above approx. 5 V Vout).	149		156	A
Output Overload Warning	Signal level on overload.	2.2			V
Output Short Circuit Protection	Occurs on overload when Vout is below approx. 5 V. May operate in burst-mode. Iavg:	 25		 90	 A
Output Voltage Fault Signal	Deviation from adjusted Vout that is considered as a fault.	±3	±4	±5	%
Output Voltage Margin	Output voltage swing available through Margin pin (analog).	±4.8	±5.0	±5.2	%
Overtemperature / Fan Failure Warning	Time between fault warning and shutdown. Latching shutdown.	100			ms
Overvoltage Protection	Latch style overvoltage protection.	55.2	57.6	60.0	V
Power Supply Present Signal	Resistance to logic ground upon insertion of supply.		1000		Ω
Remote Sense	Maximum load lead loss compensation (round trip).			1.0	V

SAFETY, REGULATORY AND EMI SPECIFICATIONS

PARAMETER	DESCRIPTION / CONDITIONS		MIN	NOM	MAX	UNITS
Agency Approvals	Approved to the latest edition of the following standards: UL/CSA60950-1, IEC60950-1 and EN60950-1. CE marked for the Low Voltage Directive.					
Electromagnetic Interference	FCC CFR title 47 Part 15 Sub-Part B - Conducted. EN55022 / CISPR 22 Conducted.		A A			Class
ESD Susceptibility	Per EN61000-4-2, level 4		8			kV
Radiated Susceptibility	Per EN61000-4-3, level 3.		10			V/M
EFT/Burst	Per EN61000-4-4, level 4.		±4			kV
Input Transient Protection	Per EN61000-4-5.	Line-to-Line: Line-to-Ground:	4 3			kV
Voltage Sag Immunity	Per SEMI F47-0200 FXC/FXP7000			Pending		
Leakage Current	Per UL60950 and EN60950:	FXP7000 at 240 VAC, 60 Hz: FXP7000 at 400 VAC, 50 Hz: FXP7000 at 480 VAC, 60 Hz:			5 7 10	mA

[3] All logic outputs listed below feature a standard active pull-down output with 0.4V max at 40mA sink capability, and a 100k pull-up to 5V.
[4] In addition to those listed below, signals and front-panel LEDs are provided to indicate: overtemperature / fan fault, AC phase imbalance, output good, interlock open, and supply inhibited. The FXP also provides 4 LED's indicating output loading.
[5] **Both signals must be pulled to logic ground for the unit to operate.**
Enables are 100% redundant internally for applications where redundant inhibit is desirable. Contact factory for additional design details.
