

Statement on Non-Use of Substances that Deplete the Ozone Layer

Ozone depleting substances (ODS) are chemicals that destroys the earth's protective ozone layer when released in the environment. They include:

Chlorofluorocarbons (CFCs), Halon, Carbon Tetrachloride (CCl4), Methyl Chloroform (CH3CCl3), Hydrobromofluorocarbons (HBFCs), Hydrochlorofluorocarbons (HCFCs), Methyl Bromide (CH3Br), Bromochloromethane (CH2BrCl).

We, Bel Fuse Inc. carefully review data provided by our suppliers. To the present and best of our knowledge, and based on the information available to us, ODS is not present in all our products.

We will continue to send surveys to our suppliers on a regular basis. Should we discover that ODS exists within our supply chain, Bel Fuse Inc. will notify the affected parties and will take necessary action to deliver ODS-free products.
